

## Sprint 1 - Individual Status Report

### Last week's goals:

Our goals from last week was to create a word document that contained important planning information for the group. The document outlines who are the members of the group, what is the app that is being developed, and other details. A github repository was also created to keep track of the app development progress.

### This week's goals:

This week we are planning on creating a Trello board for all group members to keep track of the app development process. We are also going to make sure that all members can use the github repository.

### Next week's goals:

Next week we are planning on deciding who is going to be the weekly leader and we are going to start making progress towards that app we need to develop.
