Sprint 4 - Individual Status Report

Last week's goals:

Last week we worked on wireframes and storyboards in order to determine how the app will look like.

This week's goals:

This week we worked on how a user will interact with the app through user stories. We had already created them so we just chose some of the ones we already created. We then created scenarios about a user using the features we choose. This helped us understand how the app will be used by a user.

Next week's goals:

Next week we are planning on deciding who is going to be the weekly leader and we are going to start making progress towards that app we need to develop.
