Sprint 2 - Individual Status Report

Last week's goals:

       Our goals from last week was to create a word document that contained important planning information for the group. The document outlines who are the members of the group, what is the app that is being developed, and other details. A github repository was also created to keep track of the app development progress.

This week's goals:

       This week we worked on wireframes and storyboards in order to determine how the app will look like.

Next week's goals:

       Next week we are planning on deciding who is going to be the weekly leader and we are going to start making progress towards that app we need to develop.
